

WHO CLASS IV

# Dictator-Plus<sup>®</sup> 28.7 EC

MITICIDE/ACARICIDE

Guarantee: **Propargite 21.2% w/v + Tetradifon 7.5% w/v**  
Formulation: **Emulsifiable Concentrate**  
Classification: **IRAC 12 C (Propargite + Tetradifon)**

## General Description

Dictator Plus 28.7 EC is a unique non-systemic, combination acaricide for the effective control of all mite species. It controls the mites on a wide range of agricultural crops such as fruit trees, grapes, ornamentals and vegetables.

## Feature

The two active ingredients in the product enable the control of all growth stages of the mites.

Tetradifon: • Destroys mites eggs  
• Destroys nymphs

Propargite: • Destroys motile stages including adults

## Mode of Action

Tetradifon possesses long-acting properties, and is able to penetrate through the plant tissue. It exhibits contact action on eggs and all non-adult stages, and also acts indirectly by sterilisation of females, leading to the development of non-viable eggs.

Propargite on the other hand predominantly works through contact action and has good residual activity particularly on the motile stages of phytophagous mites.

## Recommended Application Rates

Crop	Pests	Rates	Spray Interval
Flowers, e.g. Roses and Carnations	Spidermites	16 ml /20L 800ml/ha	4 - 6 days
Vegetables, e.g. Tomatoes	Spidermites	16 ml /20L 800ml/ha (in 1000L water)	7 days

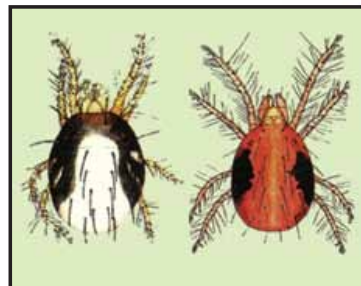

**Pre Harvest Interval:** Tomatoes - 14 days

## Other Suggested Uses

Crop	Pests	Safety period
Citrus	25-35ml/20L	14 days
Pome and stone Fruits, Grape	25-35ml/20L	14 days

**Compatibility:** Compatible with most commonly used agrochemicals. However, it is incompatible with alkaline materials, mineral oil and its derivatives.

**Phytotoxicity:** Always try for varietal tolerance especially on ornamentals and flowers. Do not use on beans and peas when temperatures are high.

Spidermites
