

Easygro[®] CALCIUM

14:0:2+TE

Foliar Fertilizer & Fertigation

Formulation: **Soluble Crystals**

Composition: **N.P.K 14.0.2 Plus 13% Calcium, 2.5% Magnesium + Trace elements.**

General Description:

This is a crystalline soluble fertilizer specially formulated for foliar application on setting and growing fruits. It contains a high concentration of the nutrient calcium, which is essential for cell development and overall fruit development and longevity. It is a remedy for blossom end rot, a physiological disorder in fruiting crops characterized by a water soaked spot at the bottom end of the fruit that later turns brown, dark and leathery. In drought conditions and during heavy continuous rains, unavailability of calcium is aggravated and Blossom End Rot occurs.

Features and benefits

- Remedies the blossom end rot disorder
- Imparts firmness in the fruit texture, which greatly improves post harvest keeping qualities.
- Highly soluble and readily taken up by plants
- All micronutrients are chelated to enhance uptake

Recommended Application Rates

Crop	Rate	Interval
Vegetables e.g. Beans, Peas, Chillies, Cucurbits, Carrots, Onions, Tomatoes etc. Flowers	30 - 40 gms / 20Lt of water (1 - 3kg / ha)	Apply as full cover spray on foliage and directly onto fruits at 7 - 14 days interval.
Tree crops e.g. (citrus, coffee, Mangoes, Avocado), Cotton etc	30 - 40 gms / 20Lt of water (4 - 6kg / ha)	

Use the lower rate for maintenance and the higher rate for actual deficiency. For fertigation use 5-10kg at a dilution of 0.25kg-2kg in 100 litres.

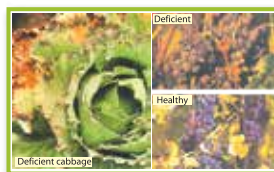

Compatibility: EASYGRO[®] Calcium is compatible with most agricultural remedies. Avoid lime sulphur, white oils and certain copper formulations.

Calcium deficiency

Blossom end rot & Ca deficiency
(Tomato) (Peas)

Potassium deficiency

Magnesium deficiency

Pack Sizes: 120gms, 250gms, 500gms & 1kg
