

FILWET[®]

WETTER, STICKER, SPREADER

Composition: **Organosilicone 100%**
Formulation: **Soluble Liquid**

General Description

FILWET is a liquid agricultural wetter, spreader and sticker. It improves retention of spray on plant surfaces and enhances distribution of spray over plant foliage. FILWET reduces the surface tension of the spray mixture, thus improving wetting properties.

FILWET improves the spreading properties of pesticides and fertilizers thus improving their efficacy.

FILWET is especially vital during the rainy season to prevent the chemical from being washed away by rain and overhead irrigation water. However, FILWET is also useful in any season to achieve homogenous spread of spray chemical on the crop.

NB: Poor spread may result in large spray drops, which may end up scotching the leaves after the spray has dried. FILWET is also recommended for naturally difficult to wet leaves like coffee, tea, cole crops (e.g cabbage) and such other similarly textured leaves.

Directions for Use

Add the recommended amount of FILWET to the spray water before adding other chemicals.

Mixing Rate

Crop	Inclusion Rates
Fungicides	5-10ml/20lt of spray water 250-500ml in 1000Lts of spray mixture.
Insecticides	10-15ml/20lt of spray water 500-750ml in 1000Lts of spray mixture
Herbicides	20-25ml/20lt of spray water 1Lt-1.25Lt in 1000Lts of spray mixture.

NB: Read the individual pesticide label carefully before use.

Caution:

FILWET improves the efficacy of the chemicals by enhancing wetting and sticking properties. Therefore, caution should be observed when incorporating FILWET so as not exceed the recommended dosage of other chemicals otherwise the higher efficacy may result in scotching.

Compatibility:

FILWET is compatible with most agricultural sprays unless otherwise expressly stated by the chemical manufacturers. However, always undertake compatibility tests on a small scale before mixing large quantities.
