

SKANA SUPER®

GRAIN STORAGE DUST

Guarantee: **Malathion 2.0% + Permethrin 0.3%w/w**
Formulation: **Wettable Powder**

General Description: Skana Super is a grain dust with excellent control of larger grain borers, and weevils in stored grain.

Rate of Application: Cob-maize: Sprinkle Skana Super after every layer of 30-40cm (approximately 50gm of Skana Super Dust for every two bags of cob maize).
Shelled Grain: (Maize, beans etc.) Dust at the rate of 50gm /bag (90kg) and mix thoroughly using a shovel on canvas.

Dust the outside of the 90kg bags after filling to stem back re-infestation. The container is marked in 50g graduations for ease of use.

Directions For Use

1 Harvest the maize when ready and shell the cobs.

2 Shelling can be done manually or mechanically.

3 Ensure the maize is well dried.

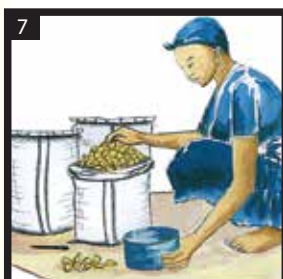

4 Winnow the maize to remove debris, dust and broken seed and retain the clean seed.

5 Place the grain on canvas/polythene sheet. Apply the recommended amount of Skana® Super Grain Dust (50gm for every 90kg bag).

6 Thoroughly mix Skana® Super Grain Dust with the grain to ensure uniform mixture.

7 Place treated grain in clean bags and stitch for storage. It is recommended that you dust the bags before and after filling.

8 Dust the granary/store before placing the treated bags or grain. Repeat treatment after six months.

Lesser Grain Borer

Grain Weevil

Agoumois Grain Moth

Red Flour Beetle

Dried Bean Beetle

Larger Grain Borer
