DISINFECTANT BALLS

DISINFECTANT BALLS

MOS-BALLS are insecticides. They come in a solid form that slowly gives off a toxic gas that kills moths and other insects. They are meant to be used in closed, airtight containers so that the fumes they produce are trapped. The trapped fumes build up and kill any clothes moths inside.

If mothballs are used out in the open, they can harm people, pets, or wildlife that may touch or eat the mothballs, or breathe their vapors.
